

Robot Myth:

Robots cost more than CNC routers.

BUSTED

Robots cost more than CNC routers. Right?

Not Necessarily. Robots can cost less. Here's why...

Fact 1: KMT has developed a variety of standard systems to help plastics processors increase productivity – and profitability.

Fact 2: We continue to work on enhancing our standard line to make owning an automated trimming system feasible for just about any plastics processor.

Fact 3: With our standard systems, the price and the lead time have come down dramatically.

Fact 4: Standard systems include routers, waterjets, compliant knives, and lasers. Our engineers will help determine the best for your project.

Conclusion: When you consider the use of standard cells, the reduced maintenance costs, and the increased productivity that KMT automated systems offer, it's easy to see why robots are the intelligent choice of the future.
